System Support

System Support is FORTÉ's fully entitled service and support package that focuses on keeping your Unified Collaboration (UC), Digital Media (DM) and Audiovisual (AV) systems working at their peak performance. Because FORTÉ focuses on the human impact of these systems, we not only support the equipment, but also the end users of your systems.

Customer Care is the most comprehensive and flexible of all our managed service packages. We can apply our expertise and our proven support processes to support your UC, DM, and AV ecosystems. FORTÉ will deliver our offered entitlements in a tiered workflow model that provides support cases at an entry level for initiated incidents. From there, FORTÉ will follow an ITIL based model for remote remediation and on-site dispatch, as necessary. Specific resolver groups and subject matter experts (SMEs) will be alerted for any issue that cannot be easily remedied with Tier 1 or Tier 2 support staff.

Service Levels and response targets are based on Priority. Any needed information, feature enhancements, administrative inquiries are all classified as a request. The following is a severity summary and standard target percentages are listed in the table below.

Target Percentage for Standard Level Agreements (SLA)

Priority	Details	Incident Management Response	Remote Support Response	Onsite Dispatch (if included)	Target (%)
Critical (P1)	Multiple devices are down, unable to serve data, in a state of frequent or repeating "panic" or "hang," or is in a state of degraded performance sufficient to prevent normal business operations. At this severity, both FORTÉ and client must commit the appropriate personnel to restore the system to a functional state or until a mutually agreeable workaround is provided. SYSTEM SUPPORT WORKFLOW

FORTÉ follows an Information Technology Infrastructure Library (ITIL) framework with our approach to technology services. Generally, our tiered workflow approach will follow this structure:

- 1. Incident is reported via monitoring (when purchased), phone, email, or portal (when available)
- 2. Incident is logged in ServiceNow and triaged (Tier 1)
- 3. UC / AV / DM Troubleshooting and Remote Resolution (Tier 2)
 - a. Tier 2 remediation (and SLA) begins after Tier 1 triage has been completed.
- 4. Dispatch Escalation and Resolution (Tier 3)
 - a. Tier 3 Escalation (and SLA) begins after Tier 2 remediation has been attempted.

SERVICE COVERAGE TIME & TIER LEVELS DESCRIPTION

Coverage hours for the ProSupport department are defined as:

8 x 5	FORTÉ will provide 8 x 5 coverage across the time zone locations of the systems under coverage (North America only)
-------	---

FORTÉ ProSupport department is the initial contact point for any incoming incident. Upon identification of an issue, the ProSupport team will attempt to restore the technology service back to normal operations. Remediation activities will take place at different tiers of service, but all following a specific workflow. A general description of what happens at each tier level is as follows:

TIER 1 SERVICES:

Tier 1 services are the initial point of contact for any issue and are primarily made up of Incident Management responsibilities. Typical responsibilities for Tier 1 include:

- Taking ownership of incidents in our ServiceNow ITSM system for all issues reported or alerted on. Each incident request will have a unique reference number which is used to allow the support staff to quickly locate, add to or communicate the status of the user's issue or request.
- Assign a severity or update the severity of each incident (Critical, Standard, or Request)
- Provide electronic receipt notification for each incident.
- Provide rapid response and initial triage and technical support.
- Perform remote trouble isolation, resolution, or escalation to a Tier 2 Technician if needed.
- Ongoing status updates and case management through incident resolution.

TIER 2 SERVICES:

Tier 2 services are made up of various remote resolver groups. Escalations will take place at this level. FORTÉ will engage with a remote resolver that specializes in the incident in question. Typical responsibilities for Tier 2 include:

- Specific fault isolation down to the component level.
- Perform specific hardware configuration changes.
- Perform overall system configuration changes.
- In-depth analysis, log analysis, fault tracking and tracing.
- In-depth understanding of the core technologies utilized for corrective action.
- Promote the incident to Tier 3 escalation as needed.

TIER 3 SERVICES (available as SSA master number - if included):

Tier 3 services are made up of onsite resources that are available for dispatch. The ProSupport team will take the learnings from Tier 1 and Tier 2 teams and dispatch a site technician with the correct repair or replacement technology to fully resolve the incident. Typical responsibilities for Tier 3 include:

- Room repair and configuration changes.
- Control and audio system programming.
- Hardware swaps of on-hand critical components.
- Coordination of replacement parts.
- RMA or equipment returns to the manufacturer.
- Advanced diagnostic troubleshooting of cable paths and component level devices.
- Software and firmware updates, as well as identification of incompatible revisions.
- Acceptance testing of the resolved system.
- System health checks (preventative maintenance).
- System reimaging to correct OS/BIOS failures or to generally reconstruct a system back to functionality.

PROBLEM MANAGEMENT:

FORTÉ has a proven problem management process aimed to resolve the root causes of any Tier 3 incidents that are unresolved. Unfortunately, there are occasions where multiple issues happen across multiple platforms. These issues are escalated into an ITIL "Problem". A "problem" in this context is the unknown underlying cause of one or more incidents, and a 'known error' is a problem that is successfully diagnosed and for which either a work-around or a permanent resolution has been identified. Problems can also be identified from a single significant incident, indicative of a single error, for which the cause is unknown, but for which the impact is significant.

A known error is a condition identified by successful diagnosis of the root cause of a problem, and the subsequent development of a work-around. Problem management differs from incident management in that Problem Management aims primarily to find and resolve the root cause of a problem and thus prevent further incidents while the purpose of Incident Management is to return the service to normal level as soon as possible, with the shortest possible business impact.
